

G0 - Top-level MR-C6 / DEC-C6-01

Top-level accepted projection: produce, realize and system-to-environment dependOn. Environment composition and FR-level detail are intentionally omitted.

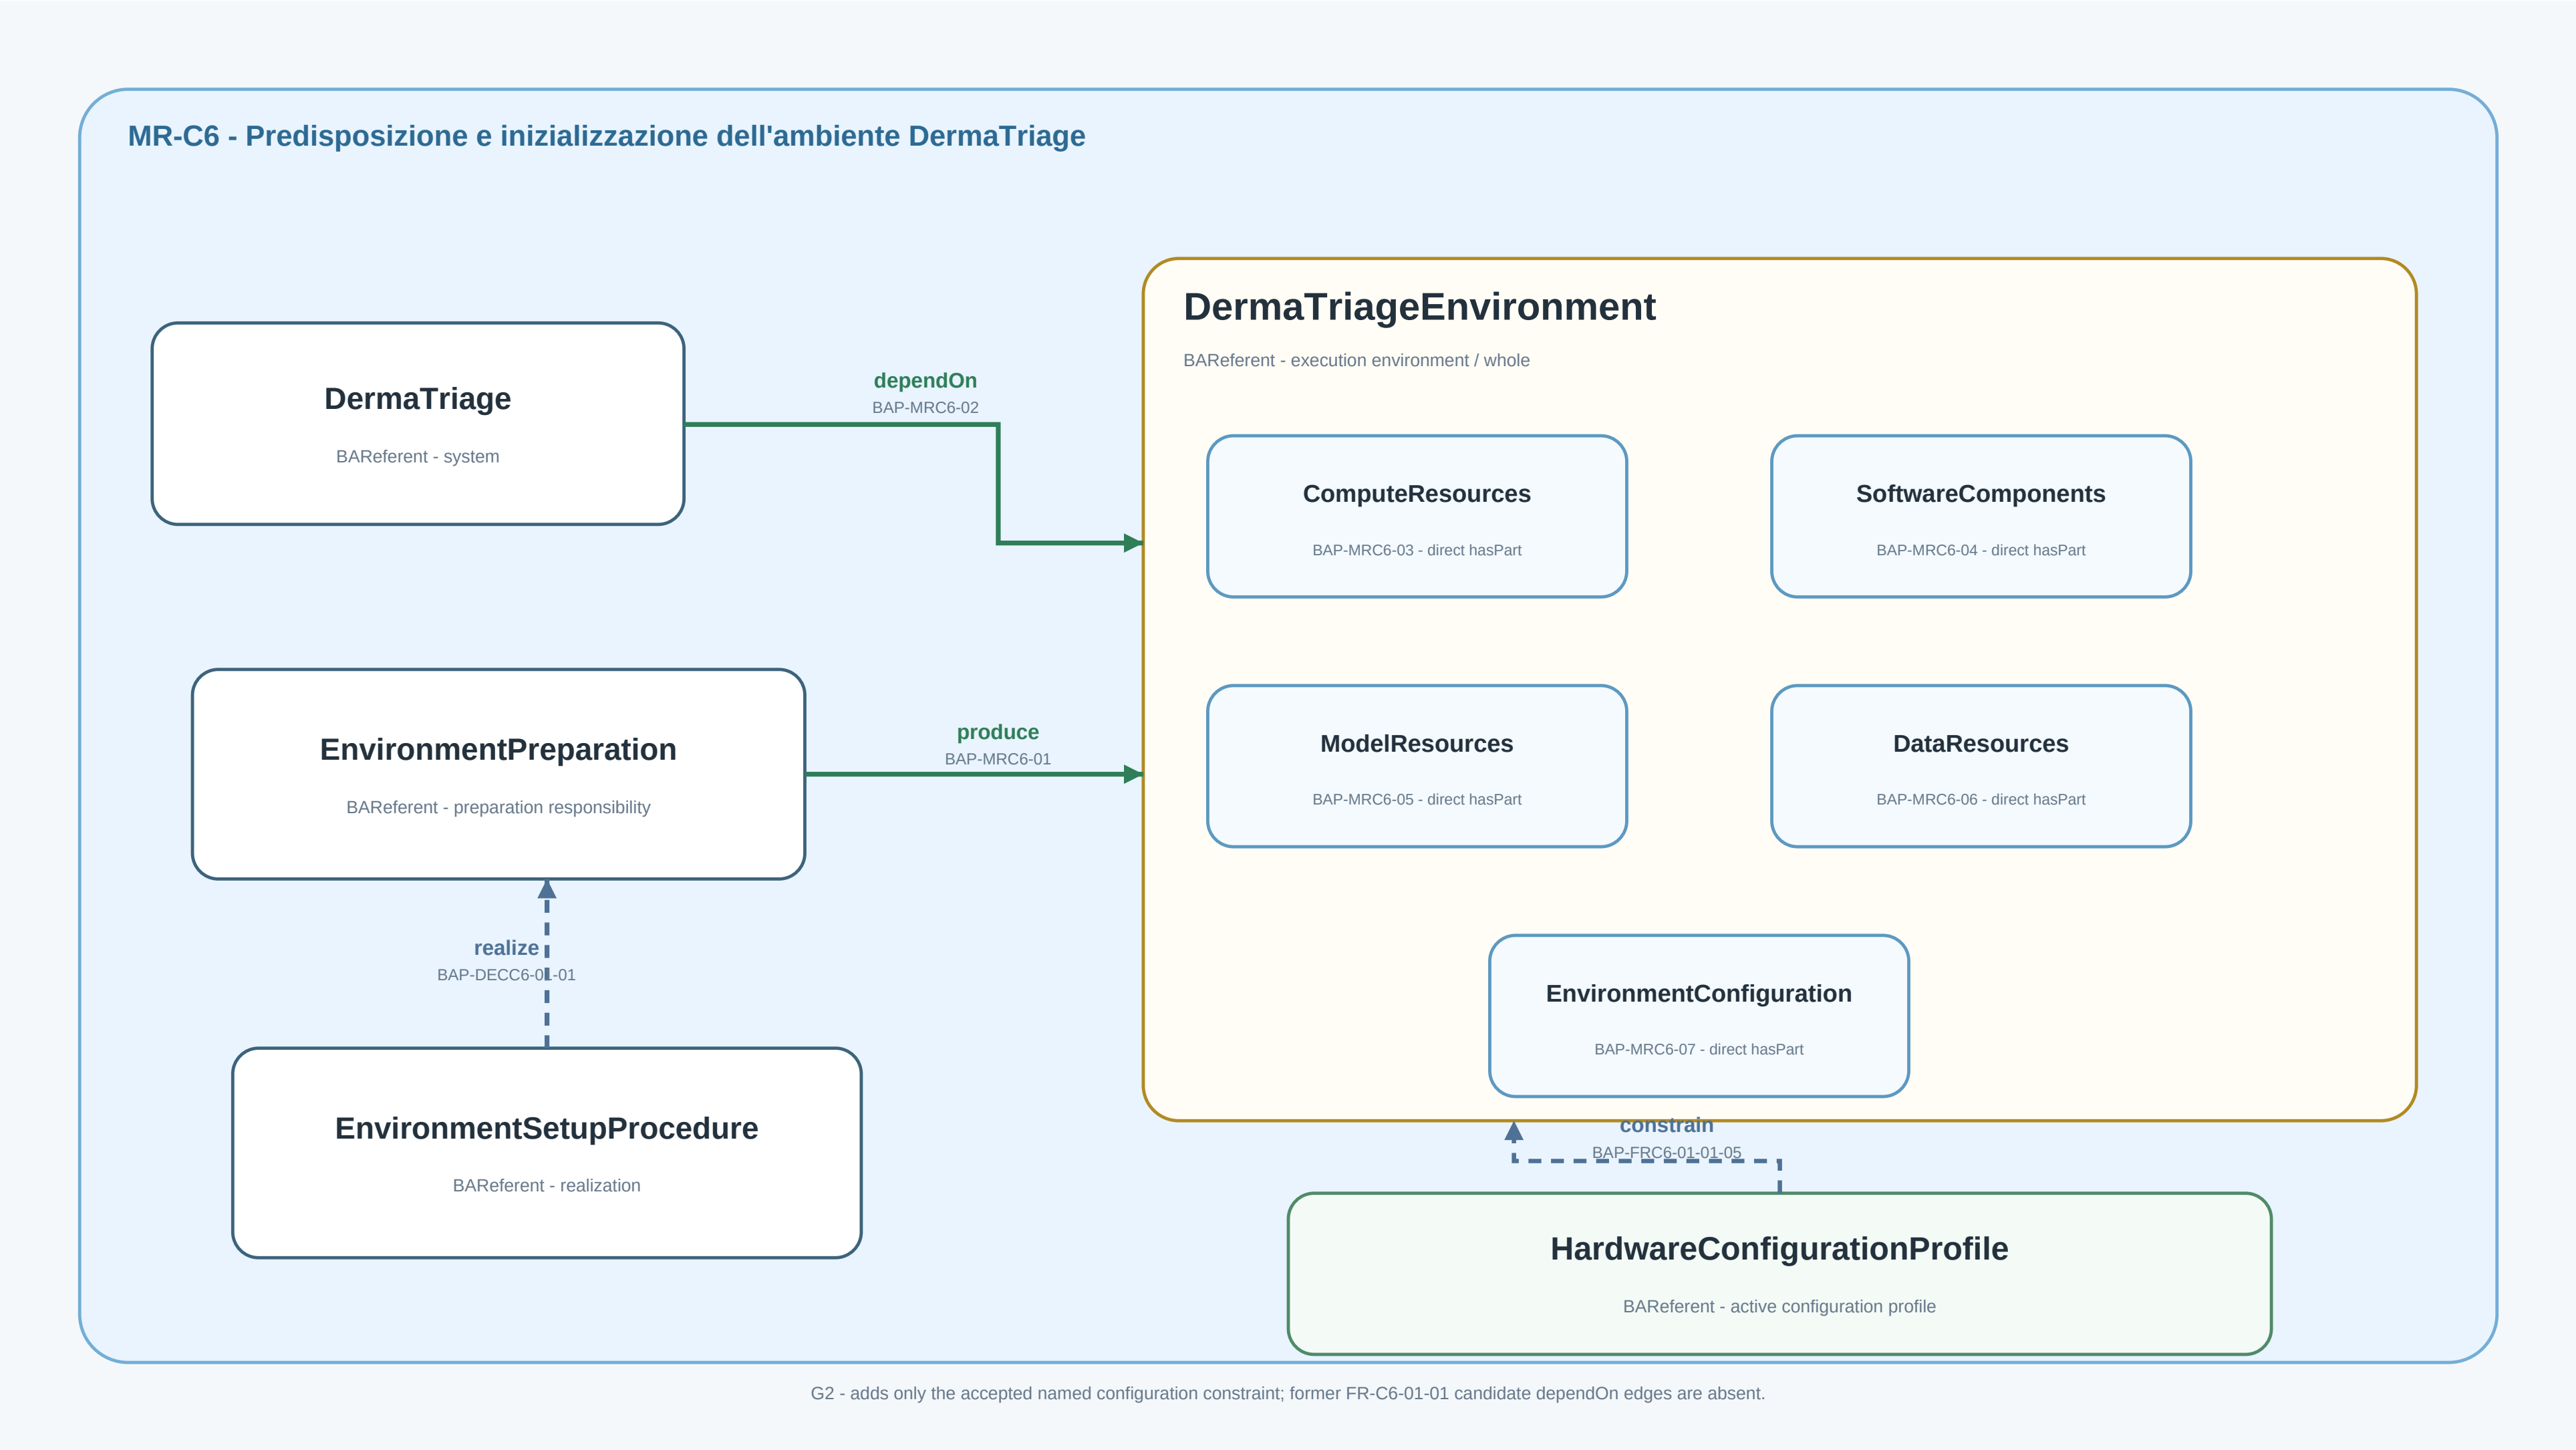

G1 - MR-C6 environment composition

G0 plus direct MR-C6 hasPart composition. Containment inside *DermaTriageEnvironment* is semantic; FR-level constraints are intentionally omitted.

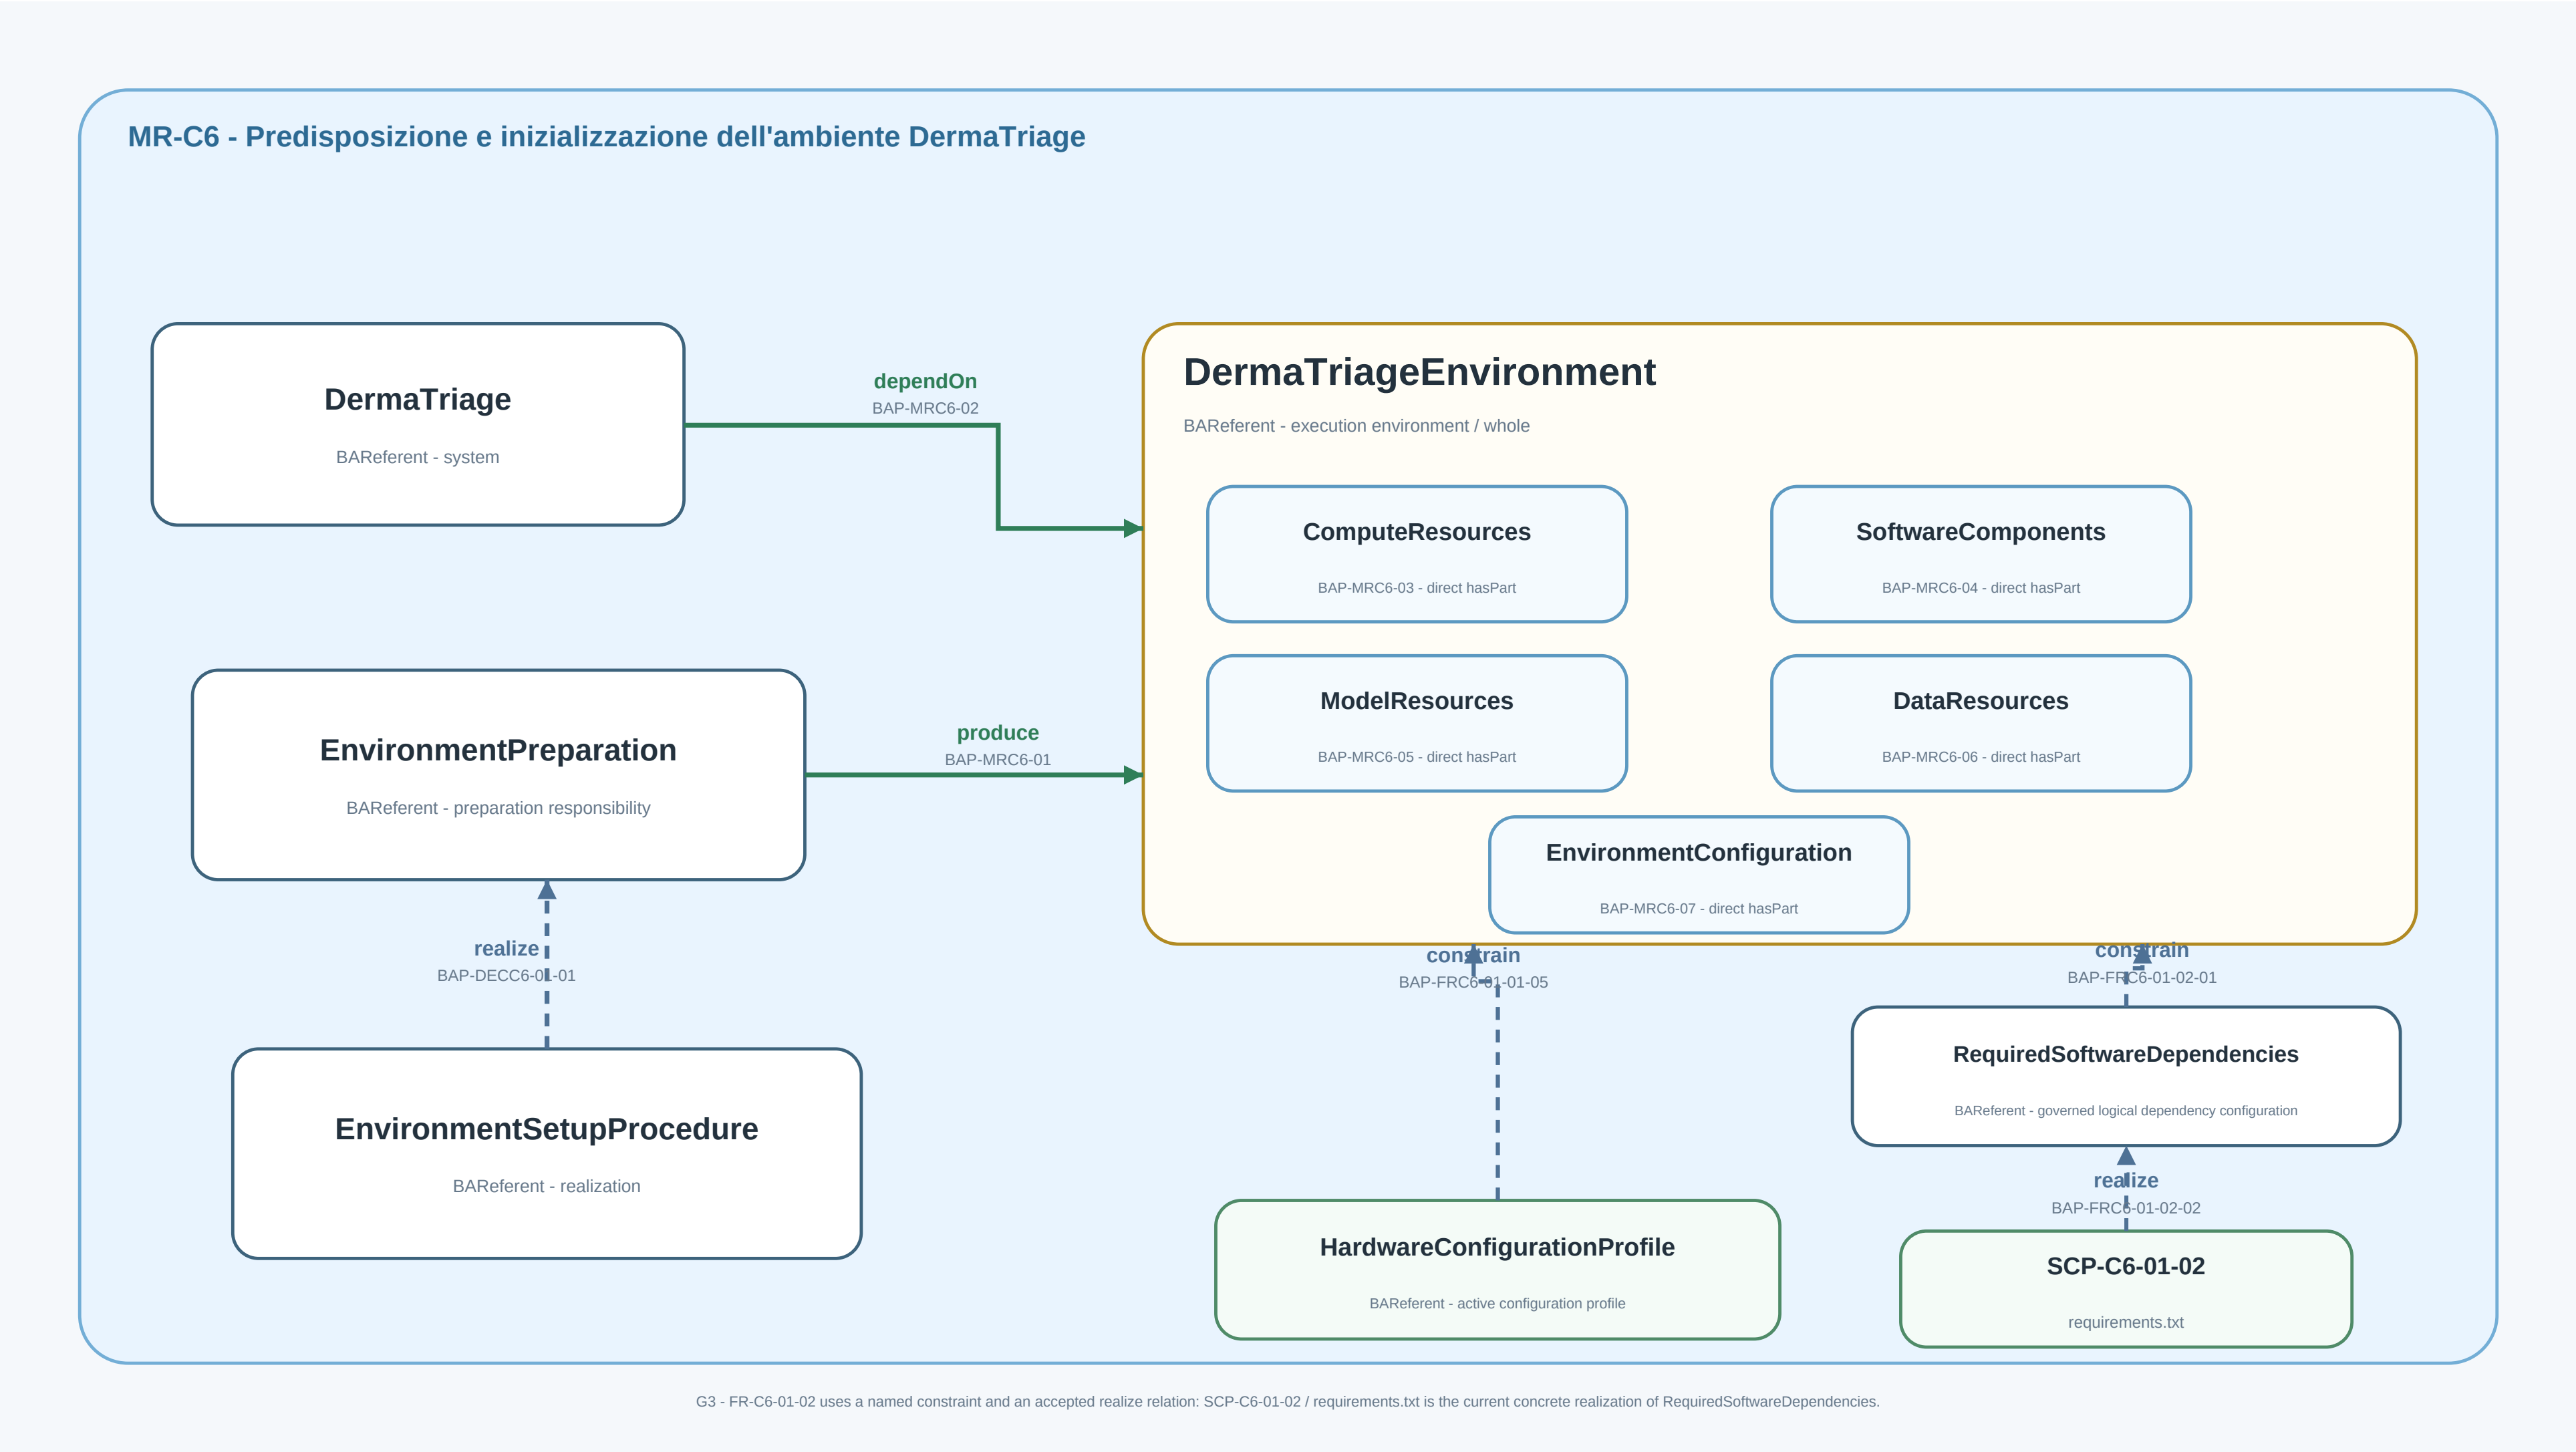

G2 - FR-C6-01-01 named hardware configuration constraint

G1 plus accepted BAP-FRC6-01-01-05: HardwareConfigurationProfile constrains DermaTriageEnvironment. Numeric profile detail remains outside this level; former candidate procedure-to-resource dependencies remain absent.

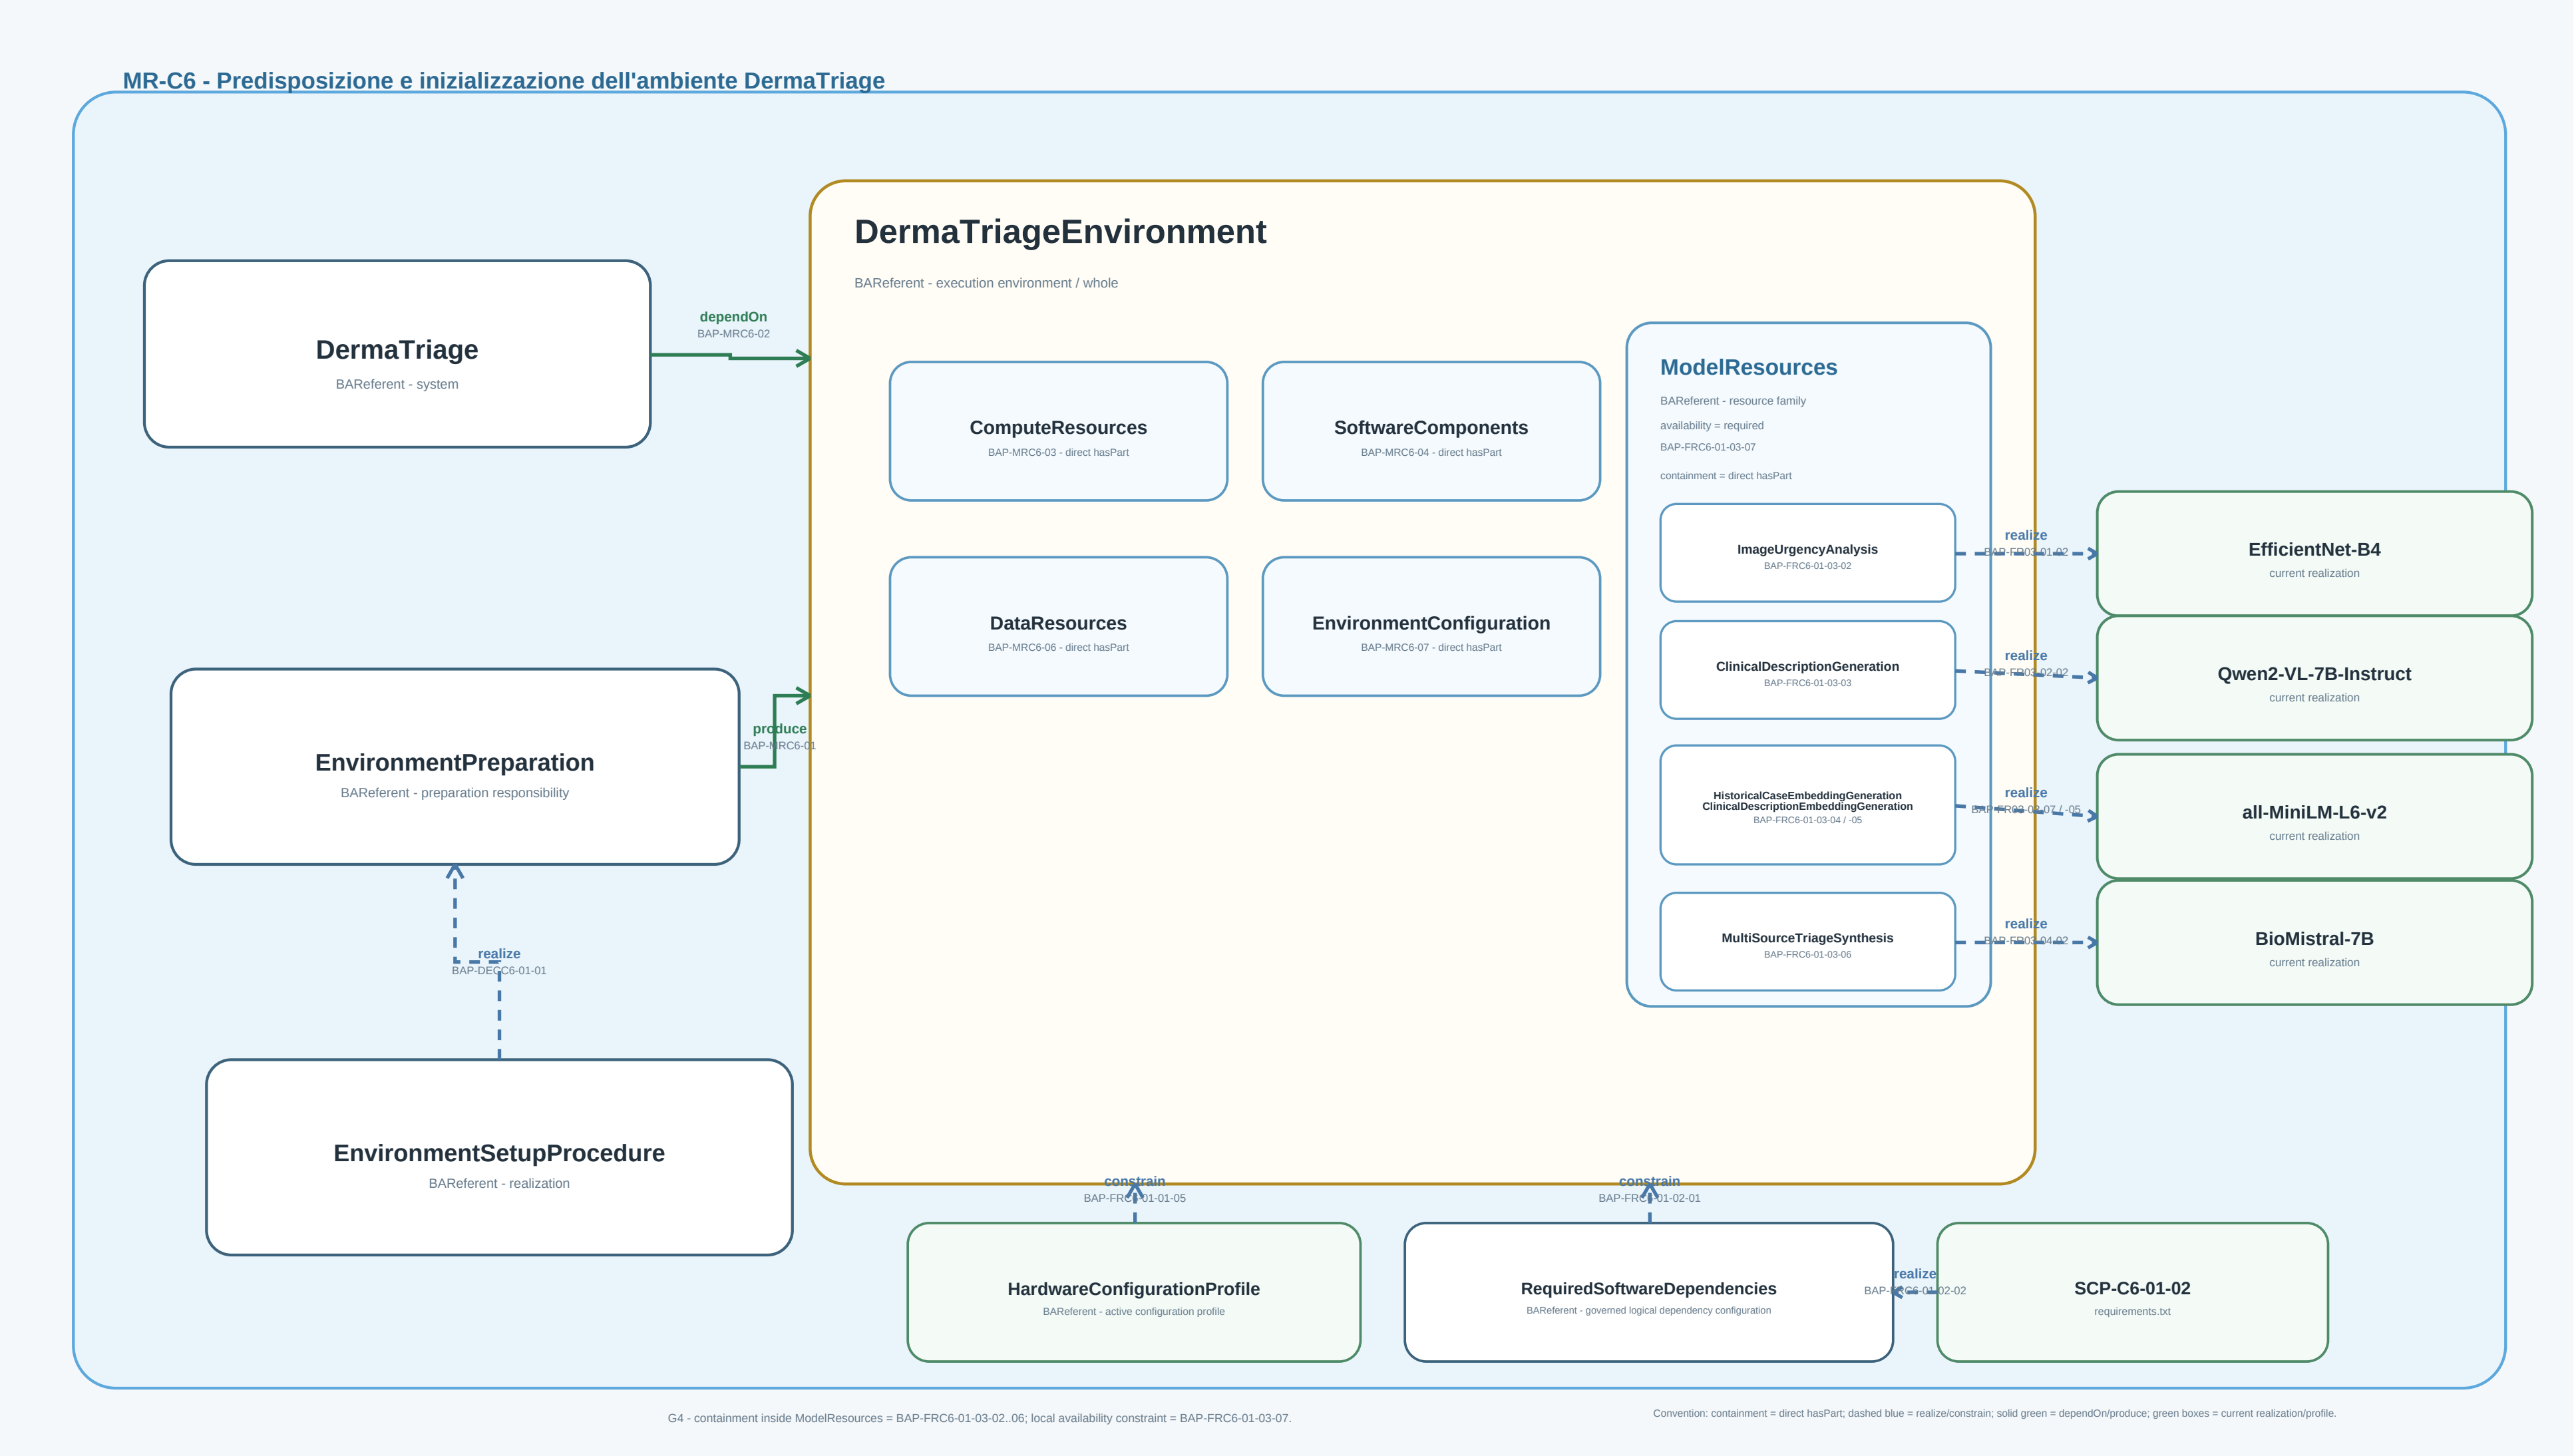

G3 - FR-C6-01-02 software availability and current composition

G2 plus accepted named BAP-FRC6-01-02-01 and accepted BAP-FRC6-01-02-02: RequiredSoftwareDependencies is the governed logical configuration and SCP-C6-01-02/requirements.txt is its current concrete realization through canonical realize. Every visible semantic edge is derived from an accepted BAProposition.

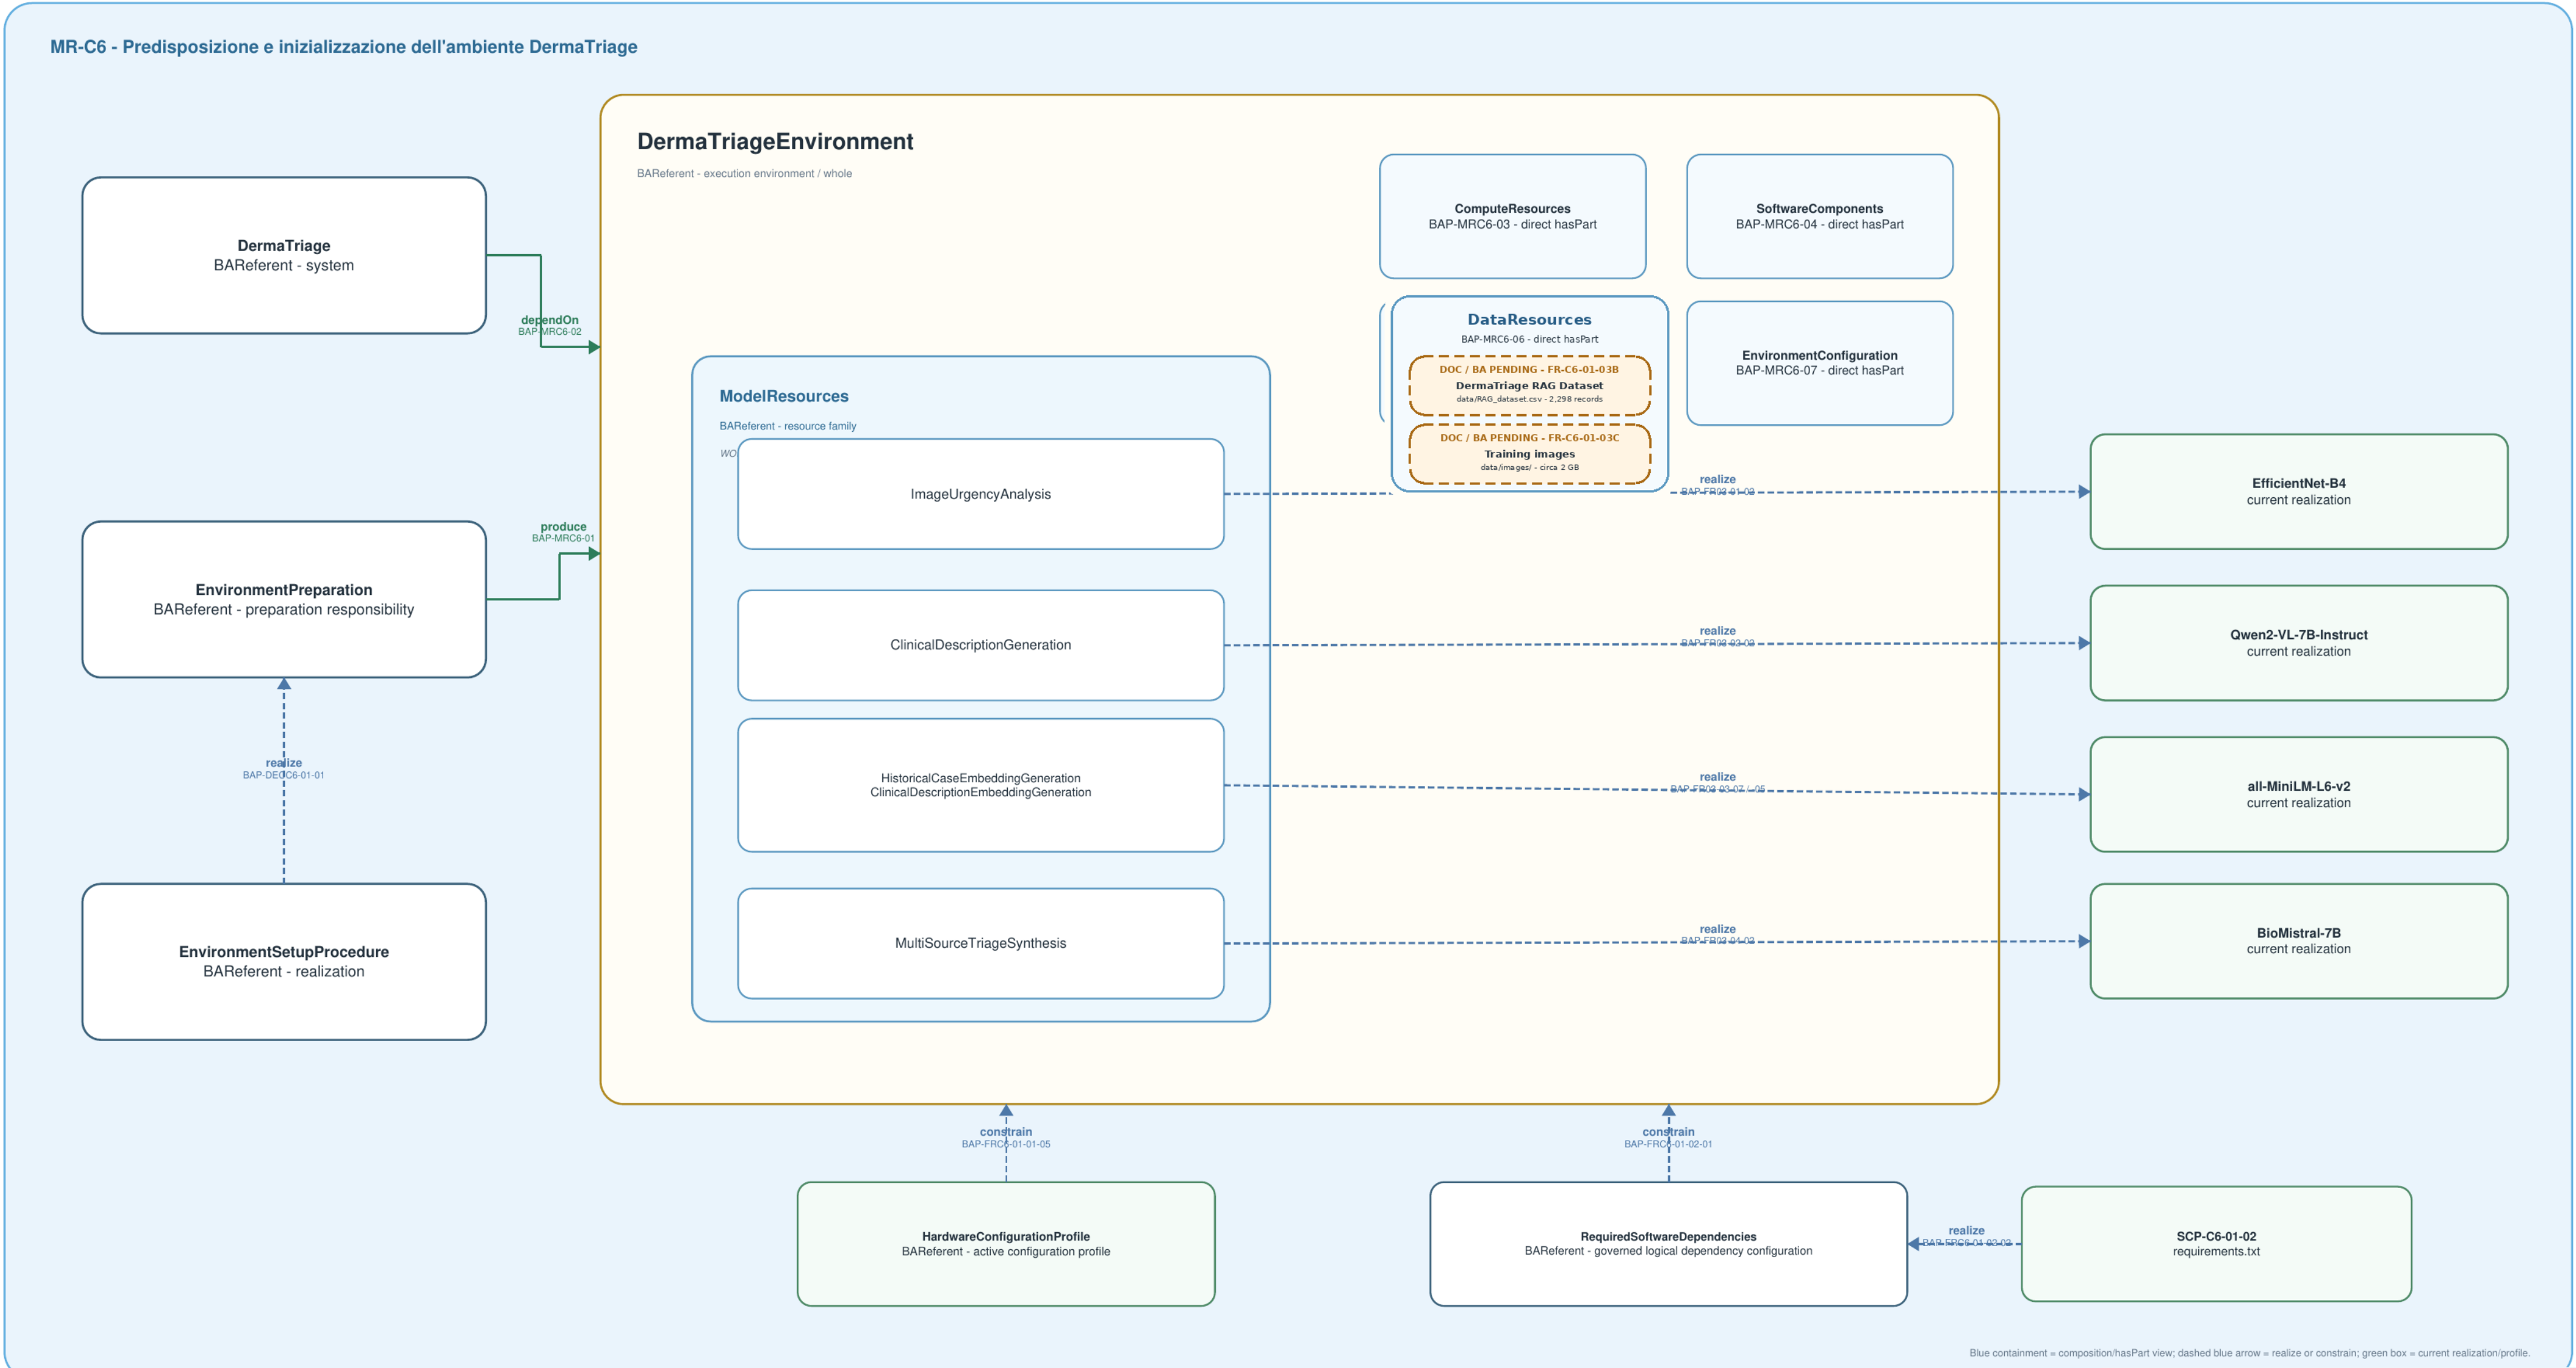

G4 - FR-C6-01-03A [review label] model-resource logical composition and current realizations

G3 plus split-review ModelResources composition. Containment denotes accepted direct hasPart; explicit realize arrows connect the logical functions to current model realizations.

G5 WORKING - FR-C6-01-03 split A/B/C: ModelResources + DataResources documentation

Based on accepted G4. Solid blue containment remains BA hasPart; dashed amber cards are documentation-only split elements with BA pending.

Blue containment = accepted hasPart. Dashed blue arrows = realize/constrain.
Amber dashed cards = documentation split only; BA NOT ANALYZED; no new BA relation asserted.
